

AISSARAPAB WATURAM

AI ENGINEER INTERN

CONTACT

- 097-210-0912
- naissarapab@gmail.com
- Nakhon Ratchasima, Thailand

EDUCATION

Bachelor of Engineering in Computer Engineering

Suranaree University of Technology
Expected Graduation: 2027

SKILLS

- Teamwork & Collaboration
- Critical Thinking & ProblemSolving
- Agile & Scrum Practices
- Time Management
- Adaptability & Fast Learning

LANGUAGES

- English (Reading & Writing)
- Thai (Native)

INTERESTS & HOBBIES

- Exploring New AI Technologies
- PC Hardware & System Optimization
- Tech Community & Reading

PROFILE

A results-driven Computer Engineering student at suranaree university of technology specializing in Applied AI, Machine Learning, and Serverless and Cloud Architectures. Highly skilled in implementing Deep Learning models and IoT solutions, and seamlessly integrating them with modern Full-Stack architectures using Go, TypeScript, Node.js, and React. Eager to contribute strong technical implementation skills and software engineering principles as an AI/ML Intern.

TECHNICAL SKILLS

- Programming Languages:** Python, TypeScript, Go, C, SQL
- AI & Machine Learning:** PyTorch, TensorFlow, Scikit-learn, Keras, LangChain, Large Language Models (LLMs), RAG
- Data Engineering & Databases:** Google BigQuery, Apache Spark (PySpark), Apache Airflow, PostgreSQL, MySQL
- Web Dev & Backend:** Node.js, React, RESTful APIs
- Tools, Cloud & IoT Platforms:** Git/GitHub, Jenkins, Docker, Linux, Raspberry Pi, Nextcloud, Tailscale, Serverless Architectures
- Core Specializations:** Machine Learning, Deep Learning, Applied AI, Serverless & Cloud Architectures, IoT Solutions

PROJECT

AI-Based Candidate Screening, Ranking and Company Policy Question Answering System AI Engineering (Capstone Project)

2025

- Designed and developed a full-stack interview scheduling system, handling end-to-end workflows from candidate booking to automated result notification via both frontend and backend
- Built and fine-tuned AI models using Typhoon AI (Typhoon 2.5 & Typhoon OCR) for intelligent candidate screening, ranking automation, and company policy Q&A capabilities

Image Captioning to Audio System | AI Engineer Course Project

2025

- Researched and implemented two deep learning architectures — CNN+LSTM (VGG16 as image encoder with LSTM-based text decoder) and ViT+GPT-2 (Vision Transformer with GPT-2 via Cross-Attention) — for image caption generation with audio output

NAS File Server | IoT & Infrastructure Engineer Course Project

2025

- Deployed a self-hosted NAS system on Raspberry Pi using Nextcloud on Apache, PHP, and Linux, providing centralized file and image storage for multiple users and devices
- Configured Tailscale VPN to enable secure remote access across networks without exposing the server to the public internet
